

## About the System

The Adacor® tank lining is an external tank lining to protect steel facilities and steel tanks. The system is developed for aboveground steel tanks, vessels and containers for corrosion protection according to the corrosion class C5 ISO 12944.

## Structure of the Lining System

## Preliminary Works

- High pressure water jet or sand blasting

## Coating Application Technology

- Apply Adacor Active Primer® as a ground layer with spraying unit or roller
- Spraying or rolling Adacor Active Glimmer®
- Spraying or rolling the cover layer Adapur HS®

## Installation Note

The above information is based on tests by approved institutes (e.g. TÜV Süd Germany) and many years of experience. As the lining performance depends on correct installation, we offer application courses for certified installers and installation supervisors and provide certificates which shall be renewed every 3 years.
